Experience Summary

- ▶ Strong analysis, design, development and management experience having worked in product based companies in different domains for more than twenty years
- ▶ Able to conceptualize and implement end to end scalable solutions by partnering closely with stakeholders
- ▶ Hands on when it comes to implementing systems having worked in startups for more than fifteen years
- ▶ Strong technical and academic background with Masters degree in Information Technology from IIT Bombay

Work Experience

Few endeavours that I am involved in currently

- **Multi-modal AI workflow platform:** Building a platform to accelerate AI and emerging technology adoption in enterprises. The platform takes inspiration from ComfyUI's node-based workflow approach, making in-house complex AI capabilities accessible for enterprises. Some representative use cases built on the platform:
 - Factory floor worker tracking and uniform compliance ([sample video](#))
 - Bank statements parsing
 - ID card generation from image
 - Meeting notes and action items generation from meeting video
 - Resume to jobs and vice versa matcher
- **Onprem WhatsApp Business Messaging Platform:** Building an on-premises platform to support large-scale campaigns, WA flows based interactions, and AI-enabled chatbot automation, with a strong focus on scalability, security, reliability, and observability.
- **Appoint-e:** Co-founded a SaaS platform for complete salon business management that streamlines operations and enhances customer experience through automation. It provides comprehensive features like appointment scheduling, staff & payout management, customer engagement and detailed reporting.

Gupshup Inc, Mumbai, India

Distinguished Engineer

[Feb 2023 – May 2025]

Gupshup provides a conversational AI platform for commerce, marketing and support. As a key member of the Central Architecture Team, I oversee the design, architecture, and scalability of Gupshup's entire product portfolio. My role involves driving organization-wide initiatives focused on security, stability, architectural best practices, and operational excellence. Some of my key contributions are:

- **Security & Compliance:**
 - Defined encryption and masking strategies for BFSI compliance, collaborating across product, engineering, and sales teams.
 - Spearheaded security discussions for various banks requirements, integrating encryption and masking into core systems.
- **Platform Engineering:**
 - Designed and implemented distributed KV store on SSDs to handle TBs of data cost effectively
 - Encryption and masking library with a backend vault service for key management using AWS KMS
- **Platform AI:** Led a team that worked on following AI first initiatives
 - AI driven support playbook automation
 - PII tokenization
 - Model based testing framework adoption
- **Stability:**
 - Drove SPOF (single points of failure) initiative across various modules to ensure fault tolerance improving overall stability
- **Deployment automation (DA):**
 - Provided guidance for our enterprise product DA using Terraform and Ansible, streamlining QA and production deployments.
 - Similar effort for our Conversation cloud is underway but using K8s helm charts based approach
 - Drove regional infrastructure rollouts of our platform allowing us to expand in new geographies like UAE, Indonesia.
- **Architectural best practises:**
 - Drove releases of our Conversation cloud product comprising of 20+ modules over 2 quarters and established various best practises to raise the quality bar
 - Standardised various processes for design documentation, architecture reviews, reporting structure and responsibilities etc.

Meta, California, US

Software Engineer

[Oct 2022 – Jan 2023]

I was a senior IC WhatsApp Business Messaging org and worked in the core messaging team.

Meta, London, UK

Engineering Manager

[May 2020 – Oct 2022]

Facebook Reality Labs brings together a world-class team of researchers, developers, and engineers to build the future of connection within virtual and augmented reality. I am a senior engineering leader at Facebook Reality Labs (RL) supporting AR/VR automation infrastructure teams. We provide an end to end testing platform for all of RL's AR/VR product portfolio. I support a team that is responsible for reliability and availability of this platform. My typical responsibilities involve:

- Technical direction

- Roadmap planning and execution
- Hiring
- People and performance management
- Cross functional collaboration on complex projects
- Scaling our platform to growing demands from different device program teams and ensuring that they can rely on us for providing reliable quality signals

Indus OS, Mumbai, India

VP Engineering

[November 2015 – February 2019]

Indus is a regional operating system based on Android and is available in 12 languages. It has strong regional language focus and also innovates in core system applications domain.

My key responsibilities and accomplishments:

- Serve as a key member of the management team to set the company's strategic direction.
- Scaled engineering team from single digit to 50 people
- Setup processes for ensuring consistent product delivery while managing the team remotely.
- Worked with different stakeholders in finance, sales, marketing, HR, Indian OEMs, Chinese ODCs etc
- Built IP messaging functionality in our Messaging product (similar to Apple's iMessage) which on server side supports more than 600K concurrent websocket connections on single m4.2xlarge EC2 instance. Also implemented bot framework on top of it to offer services like restaurant, movie, cab booking etc. Backend services use Play framework, Netty, Akka actors, MongoDB, Redis etc.
- Successfully re-architected AppBazaar server & client, one of the key products (Google Play Store equivalent) in Indus OS offering, in a very aggressive timeline of 4 months. It is currently highest revenue generator amongst all products.
- Reduced our analytics infrastructure cost to one tenth by switching to AWS Kinesis instead of AMA.

Arkin Net, Pune, India

Member of Technical Staff

[October 2014 – November 2015]

Arkin is a data center operations and security platform built using Java, Samza, Kafka, Postgres, Hbase & D3.js. It targets various use cases in the SDN (Software Defined Networking) domain where existing tools fall short and completely changes how an enterprise product functions. It was acquired by VMware in mid 2016.

My key responsibilities and accomplishments:

- Individual contributor handling Collector subsystem that was responsible for config and metrics collection from on-premise data sources like Cisco switches/routers, VMware vCenter/NSX etc.
- As the Collector subsystem ran in our customers' data center and interfaced with their core networking gear, I had to ensure that there were no performance issues that would affect our customers.
- Delivered high quality features in very fast paced development and release cycles where individual cycles were as short as a week initially.

Socho Inc., Mumbai, India

VP Engineering

[October 2013 – September 2014]

Socho was an analytics product that focused on the hospitality domain. It gave restaurant/hotel owners a dashboard that summarized crawled user reviews into higher level information using natural language processing (NLP).

My key accomplishments:

- Designed end to end architecture of the product and implemented various parts of it.
- We were a team of 5 highly focused individuals who went from initial idea to building working prototype in one and half months.
- On the technology front, we built our fact and sentiment extraction engine on top of Stanford Core NLP and used Java, AWS S3, EMR (Hadoop 2.2), RDS extensively.

Webaroo Inc., Mumbai, India

Software Engineer ... Director of Engineering

[October 2005 – September 2013]

Founded in 2004 by a group of seasoned entrepreneurs, Webaroo Inc. is headquartered in Bellevue, Washington with offices in Santa Clara (California), Mumbai (India) and New Delhi (India). Webaroo's flagship product, Gupshup, is a messaging platform, available for both consumers and enterprises. It enables both private and public mode of communication. The Enterprise part of the product is aimed at SMEs and helps fulfill their messaging needs: both transactional and promotional.

I was responsible for both Consumer and Enterprise products. Some of the highlights of the products and my responsibilities:

- Cutting edge offering that is made up of 20+ subsystems for SMS, Voice, Email, Contacts, Real time analytics, strict compliance with TRAI regulations etc. that handles daily volume of 150 million+ messages
- Guide 20+ team members to build highly scalable systems using a mix of proven (like MySQL, Java) and latest technologies (like MongoDB, Node.js, Scribe, Complex Event Processing etc.)
- Coordinate with PM, QA and Operations to ensure timely delivery of various releases

Representative hands-on work:

- Helped scale enterprise and consumer products for handling 150M+ messages from initial 1M.
- Developed NCPR service under very aggressive timelines to meet stringent performance criteria.
- Developed real time analytics service that measures message volume, different error codes and latency as messages passed through our subsystems.
- Designed and implemented Rich media (photo, audio, video) support in private and public conversations in Consumer Gupshup. I implemented both Server side APIs and client side (Android) changes.

Microsoft India (R & D) Pvt. Ltd., Hyderabad, India

Software Design Engineer

[September 2003 – May 2005]

Founded in late 90's, Microsoft India development center at Hyderabad boasts of housing top talent across India and working on key technologies and products. I was the test owner of a few subsystems in RRAS (Routing and Remote Access Service) stack and was responsible for certifying their production readiness.

Persistent Systems Pvt. Ltd., Pune, India

Member Technical Staff

[August 2002 – August 2003]

Persistent Systems focuses exclusively on Outsourced Software Product Development. I was owner of 10+ Cerity components, a product of Agilent Technologies that facilitates analysis of chemical samples, written in C++ and was responsible for design and development of new features for future releases.

Open Source Projects

Claude Agent SDK for Java

github.com/vidyalai-in/claude-agent-sdk-java

An unofficial Java SDK that enables developers to build AI-powered applications by interacting with Claude Code through a comprehensive Java API. The SDK provides both simple one-shot query interfaces and an interactive client for multi-turn conversations with bidirectional communication. Key features include dynamic model switching, real-time permission mode adjustments, built-in tool support for Read/Write/Bash operations, and a custom @Tool annotation system for creating in-process MCP servers. Built with support for Java 25+ virtual threads and sealed interfaces for type safety.

My Expense Tracker System

github.com/vidyalai-in/my-er-sys | [Live Demo](#)

A modern, privacy-focused personal expense tracking application built with React and TypeScript. This browser-based application emphasizes local-first data storage without any backend dependencies, keeping all data in IndexedDB for complete privacy. Features include comprehensive CRUD operations, import/export in JSON format, advanced filtering by date ranges and categories, time-series visualizations, interactive charts for top spending categories and tags, tag autocomplete with intelligent suggestions, and Indian currency formatting. The fully responsive design works seamlessly on both mobile and desktop devices.

Bank Statement OCR

github.com/vidyalai-in/bank-ocr

A fully local pipeline that converts bank statements (PDF or image, multi-page, any bank) into validated, structured JSON — no statement data ever leaves the machine. Ten pluggable parsers sit behind a single protocol in three families: native-text CPU parsers (pdfplumber, Camelot lattice/stream, PyMuPDF, PyMuPDF-layout, Tika) that need no GPU and no model download and finish in under 2 seconds per file — Camelot reaches 0.996 F1 on fully ruled grids and Tika leads every borderless layout measured; Docling, the default, which adds RapidOCR/PaddleOCR to read scans; and opt-in GPU models (MinerU, Marker/Surya, and GLM-OCR, a small MIT-licensed VLM with the highest recall at 99.5%). A per-parser Markdown dialect layer normalises their output so deterministic extraction of transactions and account fields holds across all of them. A local LLM (Qwen3-4B via Ollama) fills in the account holder name and acts as a fallback for non-tabular statements, and can be disabled entirely for fully deterministic runs. Running-balance math is self-validated, with discrepancies flagged rather than silently corrected. Designed to run comfortably under 8 GB of VRAM by keeping the parsing and LLM stages sequential.

Education

Master of Technology (M.Tech) – Information Technology

Kanwal Rekhi School of IT, IIT Bombay

[2000 - 2002]

- CPI: 9.51/10.00

Bachelor of Engineering (B.E.) - Electronics

Shah & Anchor Kutchhi Engineering College, University of Mumbai

[1995 - 1998]

- Awarded first class with 61%

Publications

Filter Object Framework for MICO, 4th International Symposium on Distributed Objects and Applications (DOA), University of California, Irvine, Oct 28-30, 2002.
